Description

Manufactured in Taiwan

LPHV = Low Pressure High Volume System

The wood dust and shavings of LPHV extractor are sucked through by the impeller fan blade, the heavy wood chips fall straight below in the steel canister waste bin and the finer dust continues through the blade into the next section passing through a 1 micron filtration cartridge where the air is exhausted and then fine dust falls into the lower plastic collection bag.

This type of extraction shifts huge volumes of air at low pressure and they are very efficient at removing & separating bulk waste such from Planers, Thicknessers & Wood Lathes etc, hence some people call them chip collectors.
