Laser & Plasma Machine Filtration System - FTW-6

High Volume 3600 m3/h Air Filtering Capacity

3 Micron Particles with %99.9 Efficiency

Description

The Plasma Filter Tower is an all in one, self-cleaning cartridge filter solution, with a built-in fan on top with a high efficiency MEF fan with B-type impellers.

The construction is made of robust galvanized sheet metal, with easy access to empty the dust collection bin by releasing the handle on the bin. A compressed air tank is built into the clean side of the filter, and the unit is supplied with a TIMER controller for self-cleaning.

Features

- High volume 3600 m3/h air filtering capacity
- Inlet diameter of 315mm
- Automatic Jet pulse filter cleaning
- 25L dust container, easy to access and empty
- Low noise silencers to reduce sound level
- 415V 15amp power
- Made in Europe
